## VTI IS AT THE CORE OF VIRTUALLY EVERY MAJOR ATE TESTER

VTI's signal switch/measure and control components are employed worldwide in a broad spectrum of applications for aerospace, defense, telecommunications, test and measurement, contract manufacturing, automotive, medical, and commercial functional test.

VTI presides over the VXIbus consortium, co-founded the LXI standard, and is an active member of many other consortiums that drive test and measurement industry standards. Our commitment to long-term open-platform standards has enabled system integrators to develop common ATE systems that are not impacted by the effects of obsolescence using standard products that are designed to maintain active production status in excess of 15 years.

The EX1200 is our next generation family that leverages our reputation for delivering innovative, modular high-density designs with common hardware and software architectures that can be leveraged throughout the life cycle of a product.

# LXI – The T&M Standard for Ethernet

LXI EXTENDED FUNCTIONS

In 2005, VTI cofounded LXI\*, an industry standard for Ethernet-based test instrumentation, and is also the industry leader in open platform switching solutions. LXI stands for LAN eXtension for Instrumentation. It extends on traditional LAN, adding instrument interoperability requirements, timing and synchronization options, and enhanced performance, that makes it ideal as an instrumentation platform.

The EX1200 family incorporates LXI core technology as well as optional extended function capabilities, to take full advantage of the benefits the specification offers. The EX1200 family's powerful synchronization and triggering capabilities provide the confidence that it can be integrated within any LXI, GPIB, PXI or VXI hybrid system

- Distributed switching and measurement systems over LAN
- Synchronized measurement data to IEEE 1588 precision
- Highly deterministic hardware-based triggering using the LXI Wired Trigger Bus
- Protection against PC bus obsolescence
- Assurance of multi-vendor instrument interoperability
- Scalable solutions that optimize rack space
- LAN eXtensions for Instrumentation

# OVERVIEW

The EX1200 product family is a modular and scalable series of multifunction switch/measure units that can be configured to address a variety of applications in the mechanical data acquisition and electronic test environments.

THIS FAMILY CONTAINS THE FOLLOWING CORE COMPONENTS:

MAINFRAMES

PLUG-IN CARDS

ACCESSORIES AND CONNECTIVITY

## Mainframes

- PROVIDING POWER TO THE PLUG-IN CARDS
- A SHARED COMMUNICATION BUS AND SYSTEM CLOCK
- ANALOG BUS FOR ROUTING MEASUREMENTS FROM PLUG-IN CARDS TO DMM
- SYNCHRONIZATION

Slots for inserting plug-in cards for specific functionality.

LXI wired trigger bus for precision synchronization with other instruments.

5-lane analog bus capable of routing signals up to 300 V, 3 A internally to the DMM for measurement.

Optional 6.5 digit DMM capable of measuring DCV, ACV, DCI, ACI, 2W  $\Omega$ , 4W  $\Omega$ , temperature transducers and frequency.

LXI interface allows users to control instrument and acquire data using Ethernet

## Plug-in Cards

- GENERAL PURPOSE AND MULTIPLEXER SWITCHING 300 V, 3 A
- POWER SWITCHING UP TO 16 A
- HIGH VOLTAGE SWITCHING UP TO 1000 V
- RTD SIMULATOR
- COMPARATOR/THRESHOLD DETECTOR
- RF/MICROWAVE SWITCHING
- SOURCES / TACHOMETER / COUNTERS
- DIGITAL I/O

## Robust I/O Interface

- CONNECTIVITY OPTIONS GIVE USERS CONVENIENT AND EASY METHODS TO CONNECT THE I/O TO THE INSTRUMENT

# High-Density Switching and Data Acquisition Systems

## APPLICATIONS

- High-performance switching for ATE, DC to 26.5 GHz
- Power supply switching
- Temperature monitoring (RTD, thermocouple, thermistor)
- Automotive ECM testing
- High voltage monitor
- Data logging applications
- Cable/harness testing
- Battery test
- RTD/sensor simulation
- White Goods Testing

## HIGHLIGHTS

- Modular, scalable architecture in half and full rack 1U, 3U and 8U versions provides low cost-per-channel across a wide range of channel count
- Small footprint for switching/scanning applications with up to 576 2-wire channels in 1U
- Optional EXLab "Set Up and Run" software simplifies data acquisition and analysis
- Measurement support for all thermocouple types, RTDs, and thermistors with built-in cold junction compensation
- Scan list architecture, tightly synchronized with internal 6.5 digit DMM, increases test throughput
- Analog and digital plug-in modules provide control capability of external devices
- Multiple calibration sets yield more accurate data across temperature range (up to eight per module)
- LXI communication interface eliminates platform obsolescence and support cost concerns
- Tightly synchronized measurements in a distributed architecture using IEEE 1588
- Highly deterministic handshaking using the LXI Wired Trigger Bus
- Web-based access for monitoring and control of devices, from anywhere in the world, using any web-enabled device

# Data Acquisition

## SWITCH/MEASURE AND CONTROL FOR DATA ACQUISITION

When installed with the optional 6.5 digit DMM, the EX1200 family can be configured as a cost-effective, high-density, scanning measurement and control instrument capable of acquiring data from thermocouples, RTDs, thermistors, and voltage/current sensors at rates up to 1000 samples per second.

Plug-in switch/multiplexer modules are used to expand the number of channels that can be scanned in a single system. Additional plug-in modules extend the capabilities of this instrument for data acquisition by adding precision analog and digital outputs for controlling external devices, as well source/tach for measurements on rotating machinery.

## TERMINAL BLOCKS

Terminal blocks provide wired cable assemblies with screw terminal breakout points that allow users to probe connections between instruments.

# Powerful Easy to Use Turn-key Software

## EXLab

### SET UP AND RUN

The EX1200 series is supported by the popular EXLab turn-key software package. The EXLab's intuitive GUI significantly shortens time-consuming test setup and configuration. Test engineers can begin monitoring, recording, and analyzing data within minutes.

With EXLab and the EX1200 family, engineers can design a mixed-signal distributed measurement system that includes voltage, thermocouple, RTD, and digital inputs.

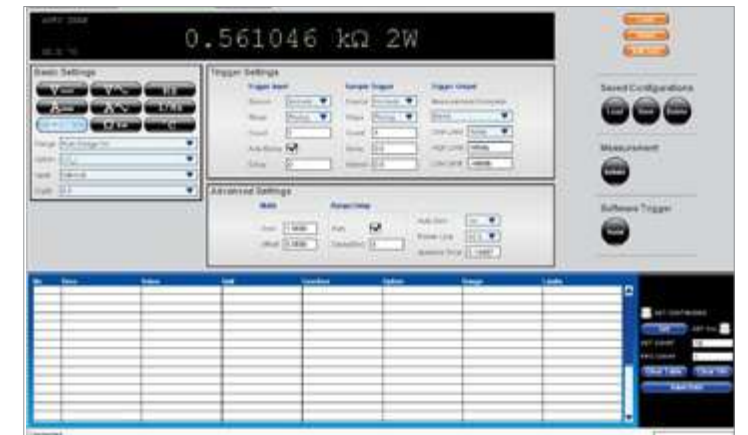

- Wide range of graphical displays to generate customized views of multiple channels
- Simultaneously Record and store time-stamped data in open data formats
- Easy instrument discovery and connectivity on startup
- Save and import configurations for repeat tests
- Easily configure alarms and triggers
- Simplified options for timing and synchronization
- Self-calibration routines accessible in software
- Calculated and virtual channels supported

# Powerful Easy to Use Turn-key Software

### EASY-TO-USE GRAPHICAL CONTROL

The EX1200 series is delivered with an embedded web interface that provides virtual monitoring and control of all switches and instruments without the need for any third-party software.

The web interface is accessible from any web-enabled device, including smart phones and tablets, and provides easy to use tools for test sequencing and scanning. Power on your instrument and start taking data in less than a minute.

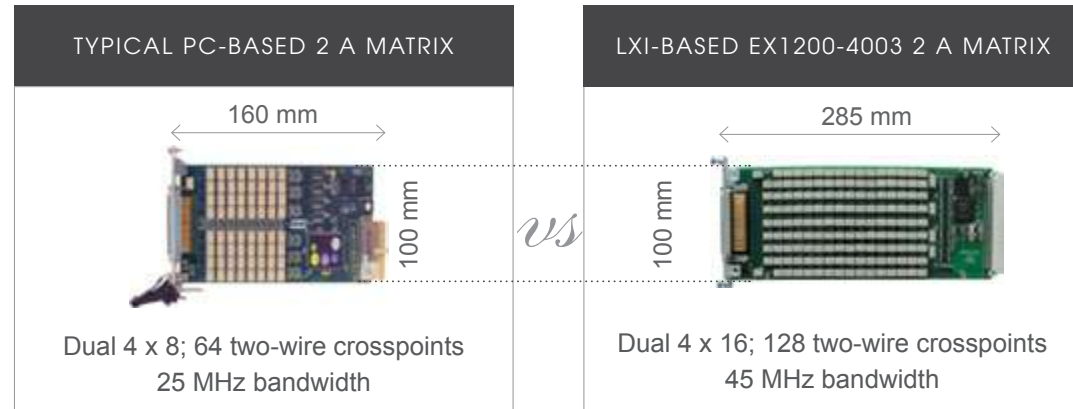

### BUILT-IN TEST SEQUENCING

A powerful embedded application dedicated to scanning measurement and control is provided. Each measurement channel can be configured independently with pass/fail limits that can be evaluated on the fly.

Stimulus and switch settings can be modified as part of the test sequence and input channels can be measured to verify how they respond to these changes. This robust utility minimizes processor overhead and test execution time.

# ATE Solutions

**HIGH DENSITY SWITCHING, INSTRUMENTATION AND I/O**

The EX1200 family is the highest density switch and I/O instrument on the market with the ability to mix low-level, power, and RF switch modules in a single mainframe.

This scalable family of products is designed to leverage capital investments in one common hardware and software platform that can be used in development, manufacturing, and field service.

Mix and match a variety of modules to build a comprehensive signal switching subsystem that can be supplemented with precision analog and digital I/O modules.

**DON'T COMPROMISE DENSITY FOR PERFORMANCE**

Typical switch cards that conform to the 3U Eurocard footprint (e.g. PXI) have a limited amount of available working space and manufacturers are often forced to make design tradeoffs between density and performance.

To achieve higher channel counts on a PXI card, smaller relays are tightly packed on a switch module. This puts signal carrying traces closer to one another and limits the channel-to-channel crosstalk immunity as well as current carrying capacity.

EX1200 series switching modules offer nearly double the available working space and increased channel count capacity to ensure the highest degree of signal integrity in the same vertical footprint as PXI. For lower density switching applications, VTI also offers a comprehensive family of performance PXI Express switch modules.

# ATE Solution

**TREATING THE SIGNAL SWITCH IN ATE AS AN INSTRUMENT**

A key factor that differentiates VTI Instruments from competitors is that we view signal switching subsystems as precision instruments and not just a collection of relays on a card. The quality of a switch is not determined by what it does, rather by what it doesn't do; the ideal switch instruments transmit signals exactly as they come in, without attenuating, adding noise, or reducing signal integrity in any way.

With years of experience in designing precision switch instruments and a widespread install-base in virtually every major ATE system world-wide, VTI Instruments has proven that, when it comes to signal transparency, the performance offered by our switch cards is unmatched.

**SWITCH SYSTEMS THAT LACK SIGNAL TRANSPARENCY DESTROY SIGNAL INTEGRITY**

**WHY INVEST IN A 6.5 DIGIT DMM WHEN 1.5 DIGITS CAN BE LOST IN SWITCH NOISE?**

TYPICAL PC-SWITCH CARD	TYPICAL VTI SWITCH CARD
<ul style="list-style-type: none"> <li>-60 dB crosstalk @ 100 kHz</li> <li>1 V aggressor adds 1 mV of noise to 10 V signal</li> <li>&gt;30x error when compared to higher integrity switch card</li> <li>1.5 digits are lost off a measurement instrument due to the crosstalk</li> </ul>	<ul style="list-style-type: none"> <li>-90 dB crosstalk @ 100 kHz</li> <li>1 V aggressor adds only 31.6 μV noise to 10 V signal</li> <li>Maximize full range of measurement instrument capability</li> </ul>

# Open Software – Expedite System Readiness

THE MOST SIGNIFICANT INVESTMENT OF ANY AUTOMATED TEST PROJECT RESIDES IN THE SYSTEM SOFTWARE. VTI'S COMMITMENT TO DELIVERING OPEN ARCHITECTURE SOLUTIONS EXTENDS TO SOFTWARE UTILITIES AND TOOLS THAT REDUCE DEVELOPMENT TIME WHILE MAXIMIZING THE FLEXIBILITY TO CHOOSE THE APPLICATION DEVELOPMENT ENVIRONMENT.

### FLEXIBLE APPLICATION PROGRAMMING OPTIONS

Every EX1200 series module is delivered with an application programming interface (API) that conforms to industry standard IVI specifications.

The IVI drivers can be used directly in the most common application development environments such as LabVIEW™, LabWindows/CVI™, C++ and Visual Basic. The EX1200 drivers allow a programmer to :

- Achieve faster development time through system wide path-level programming
- Plan routine maintenance by automatically tracking relay closures
- Precisely synchronize distributed measurements through IEEE 1588
- Use the LXI Wired Trigger Bus for highly deterministic hardware handshaking
- Auto-instrument discovery using NI-MAX™ and Agilent Connection Expert™

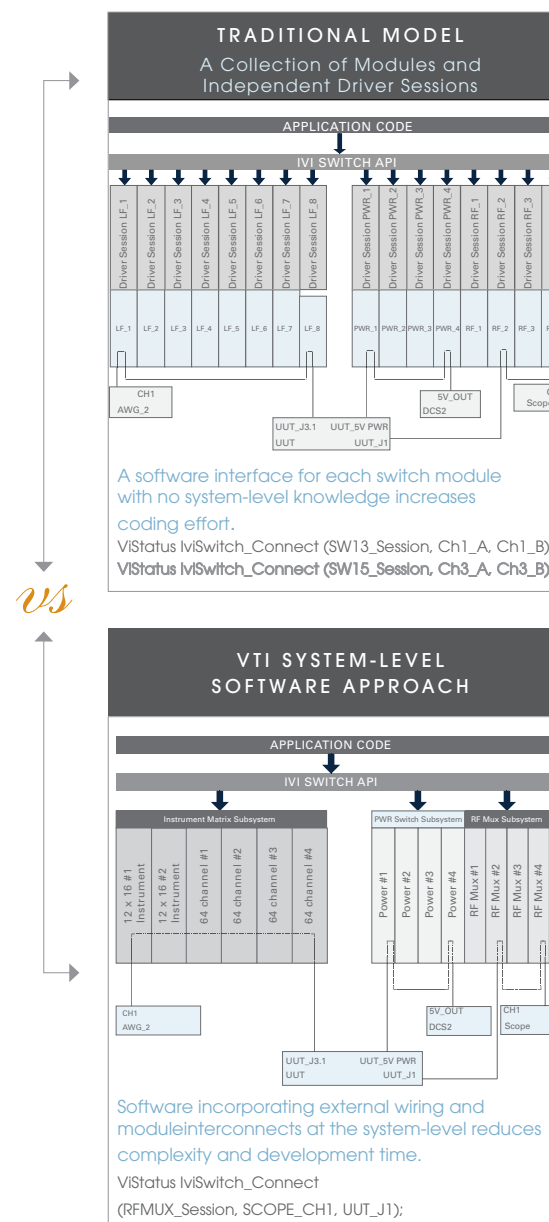

### OPERATING SYSTEM INDEPENDENCE

VTI's innovative approach to driver development provides system developers with true OS independence without sacrificing the convenience that instrument drivers deliver.

An IVI-like API can be imported into Linux® and other operating systems. The intuitive APIs simplify programming, making low-level coding unnecessary to access the full capability of the instrument.

### BUILT-IN PATH-LEVEL SWITCH CONFIGURATOR

System-level (not just card level) I/O can be logically named such that an entire path consisting of multiple relays can be connected with a single function call. On-board intelligence ensures that there are no conflicts with shared resources. With the EX1200 family there is now no need for expensive switch configurator utilities.

### CONFIDENCE CHECKING

Internal feedback provides assurance of relay closure

### EXTENSIVE TRIGGERING

Extensive hardware and LAN-based handshaking with other system devices increases test throughput by limiting communication with a host PC.

### AUTOMATIC SCANNING

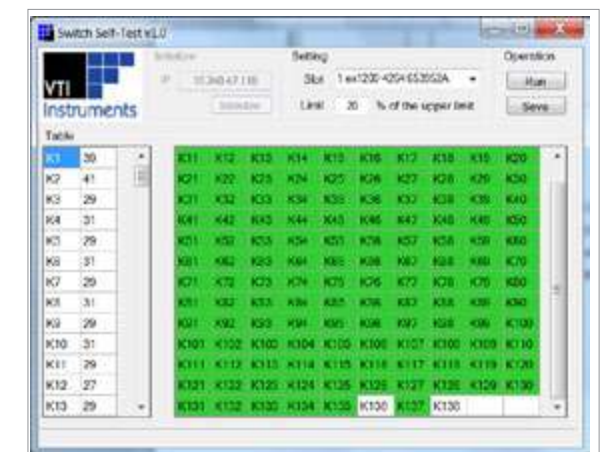

Predefined channel lists can be stored on-board to simplify programming setup and reduce test execution time.

### SAFETY INTERRUPT

This failsafe feature forces all relays to a default state in the event of a fault condition. This allows hazardous voltages to be automatically removed from the interface panels.

### PROGRAMMABLE TIMING DELAY

Delays can be programmed into the modules to account for the settling of other system devices. When used with triggers and scan lists, a highly deterministic measurement system can be easily configured.

### RELAY HEALTH MONITORING

A relay odometer keeps track of the number of times a relay has been actuated and can be used to predict routine maintenance. Switch self-test is supported on select switch instruments and tracks path resistance across relays to monitor relay health.

# Connectors and Cabling

## PROTECTING SIGNAL INTEGRITY END-TO-END

The performance of a switch system goes beyond just the relays and the switch card PCB. Everything in the signal path, including the cabling and connectors from the DUT and to the measurement instruments, can add noise and degrade the signal.

VTI optimizes the system-level performance by providing easy to use connectivity options that minimize signal loss.

## CONNECTORS AND ACCESSORIES

For each product in the EX1200 series, VTI Instruments offers a range of connectivity options that give users different options to interface to the instruments. There are four basic types of connectivity options:

DISCRETE ACCESSORIES  
PRE-ASSEMBLED CABLES  
TERMINAL BLOCKS  
INTERFACE TEST ADAPTERS

## DISCRETE ACCESSORIES

VTI Instruments offers discrete components for all its connectors that allow users to build their own cable assemblies. This includes:

MATING CONNECTORS  
STRAIN RELIEF ACCESSORIES  
CRIMP TOOLS  
CRIMP PINS  
TEFLON/PVC COATED WIRES  
INSERTION AND EXTRACTION TOOLS  
HOODS/COVERS  
NYLON SHROUDS

# Connectors and Cabling

## PRE-ASSEMBLED CABLES

VTI Instruments offers fully assembled cables that have mating connectors on one end and loose wires on the other end. Different options for cable length are available for many of the connectors.

70-0363-506	41-pin, Unterminated Cable Assembly, 3 ft
70-0363-502	44-pin, Unterminated Cable Assembly, 3 ft
70-0363-501	104-pin, Unterminated Cable Assembly, 3 ft
70-0363-505	160-pin, Unterminated Cable Assembly, 3 ft

\* To match plugin card to connector type, see table on page 20

## INTERFACE TEST ADAPTERS

Interface test adapters are used in automated test stations to interface between test instruments in the test rack and the device under test. VTI offers pre-configured mainframes with interface receivers and all associated cabling and wiring. Please refer to VTI's creatEX series data sheets.

CMX24-XT	Integrated 18-slot PXI Express/EX1206A mainframe with pull-through receiver
CMX34-G18	Integrated 18 slot PXI Express/EX1208A mainframe, with cabled receiver

# PXIe Switching

## PXI EXPRESS SWITCHING

For applications where the channel counts for signal switching are not large, VTI offers the SMX series - a broad range of "precision instrumentation grade" switch modules on the PXIe platform.

The SMX series is an extension to the EX1200 series, and can be controlled using the same instrument drivers. This allows smaller systems within PXI to be upgraded, or larger systems to be downsized very easily.

Unlike traditional PXI switch modules available in the market that pack relays onto cards to maximize density while ignoring performance, SMX series is designed with VTI's core philosophy of high-density without compromising on performance.

- Best-in-class signal switching performance on PXI/PXIe form factor
- PXIe as opposed to PXI - mitigates obsolescence and is based on faster, newer, and forward looking instrumentation platform
- Relay health monitoring and self-test within matrix cards
- Software benefits - path level switching, confidence checking, and safety interrupts

## PXI EXPRESS SWITCH MODULES

SMX-3276	76 channel, dual (1x38) 2-wire, 300V/2A multiplexer
SMX-4410	160 crosspoint, four (4x10), 2-wire, 300V/2A matrix

### OVERVIEW

- Modular 6.5 digit DMMs for the EX1200 mainframes
- Tightly integrated into mainframes, allowing high-speed, synchronized scanning measurements without the need for external cabling.
- Input can be routed directly to the DMM or through an internal analog bus on the backplane.
- Super fast scanning with no processor intervention required
- Scanning configuration can be saved in the DMM's non-volatile memory allowing quick recall of saved states
- Integrating ADC for with adjustable integration time depending on the level of accuracy required.
- "True RMS" AC readings
- Frequency and temperature measurements

## EX1200-1538

## Multifunction Counter, DAQ, and DIO

## APPLICATIONS

Single frequency measurement range from 0.05 Hz to 1 MHz

Tooth wheel RPM measurement

Measure position and speed from quadrature encoder signal

Wide range of measurement functions makes this ideal for both electronic functional test and data acquisition

## FEATURES

- 8 frequency counter channels, 16 isolated digital I/O, 2 isolated DAC channels per card
- Highly stable 50 MHz, TCXO base clock along with 32-bit counter for frequency measurement
- Counter channel accepts both analog and digital inputs with  $\pm 48$  V differential input range eliminates need for signal conditioning in most applications
- Programmable hysteresis and threshold levels
- Isolated digital
- Precision isolated 16-bit current or voltage source

## General Specifications

## FREQUENCY/COUNTER INPUTS

NUMBER OF CHANNELS	8 (analog/digital)
DIGITAL INPUT SIGNAL RANGE	TTL
ANALOG INPUT SIGNAL RANGE	$\pm 48$ V
COMMON MODE INPUT	250 V peak

SIGNAL FREQUENCY RANGE	0.05 Hz - 1 MHz in DC coupling mode
MAIN TIME BASE CLOCK	50 MHz
TIME BASE CLOCK STABILITY	$\pm 1$ ppm
COUNTER TYPE	32-bit, reciprocal counting type
MINIMUM DETECTABLE PULSE	600 ns on analog channel
RPM MEASUREMENT RANGE	3 RPM to 90,000 RPM
SAMPLE DATA CORRELATION	IEEE 1588 timestamp
ON-BOARD MEMORY	256,000 reading
AVERAGING METHODS	Moving average and simple average
APERTURE TIME WINDOW	1 ms to 30 s (1 ms programming steps)

## High Power Switch Modules

### APPLICATIONS

- High current/high power switching
- AC line power switching
- Switching AC or DC power supplies
- Driving relays for industrial machines
- Solenoid switching
- Automotive engine control

### FEATURES

- Switch up to 16 A current – highest in its class
- Large switching capacity in a small footprint
- High breakdown voltage (1,000 V rms between open contacts)
- Failsafe interrupt detects fault conditions and opens relays to their default state. This protects the test object from damage if a fault occurs.

## High Voltage Multiplexers

### APPLICATIONS

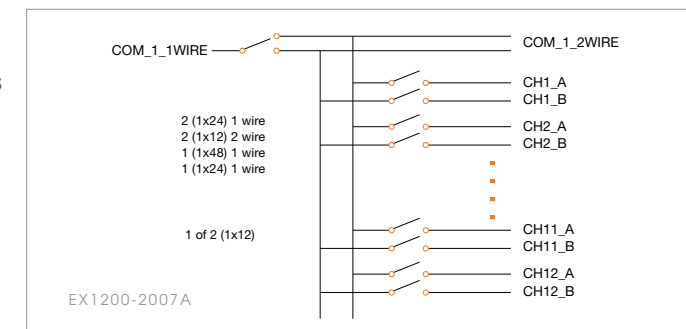

- High voltage multiplexing and scanning
- Hi-pot tests
- Switching source measure unit
- Cable breakdown test
- Power supply switching
- Power generator testing

### FEATURES

- Switch signals up to 1000 V
- Large shield planes used to reduce crosstalk and voltage spikes to adjacent channels
- Failsafe interrupt detects fault conditions and opens relays to their default state. This protects the test object from damage if a fault occurs.
- EX1200-2087A features Continuous Relay Self-Monitoring that continuously checks for welded relay contacts and generates an interrupt if detected. This protects the test object by preventing unintentional routing of power.

APPLICATIONS

- Applications where multiple points need to be switched to a common resource
- Thermal chamber testing
- Battery test
- Cable harness testing
- Semiconductor and PCB testing

FEATURES

- High density, 300 V/2 A multiplexers/scanner
- Direct routing to EX1200 series DMM through internal analog measurement bus simplifies field wiring
- Support thermocouple, RTD, and thermistor measurements with optional terminal block with built in CJC reference
- On-board scanning greatly reduces overall test execution time
- Configure as 1- (-3001 only), 2- or 4- wire under program control
- Discharge relays to bleed out stray charge for sensitive measurements

### APPLICATIONS

- 500 kSa/s arbitrary waveform generation
- ±20 V, ±10 V, ±5 V, ±2 V and ±1 V output ranges
- ±20 mA, ±10 mA, and ±5 mA, output ranges
- Sensor simulation
- Static output

### FEATURES

- 4 (-3604) or 8 (-3608) independent, isolated, 16-bit D/A converter
- Isolated outputs can be combined in series to extend range to 160 V or in parallel to achieve 160 mA
- Extensive triggering capability
- Synchronize level changes with input measurements to facilitate test sequencing
- Sense lines for every channel to compensate for cable
- Voltage or current source

## Prototyping Card

### APPLICATIONS

22 square inches through hole pattern breadboard space for user defined designs

Handles back end LXI communication and access to LXI trigger bus and allows user designed front end

12.5 MHz clock for complex designs

### FEATURES

- 96 Digital I/O lines configurable as input or output
- Three power supply rails
- Multiple front panel connector options
- IVI driver simplifies software development

## Microwave Switch

### APPLICATIONS

RF and microwave component/ equipment testing

Ideal for switching multiple test points to spectrum/network analyzers, high frequency oscilloscopes, or RF sources

Radar and satellite testing

Cell phone and wireless devices testing

Semiconductor chipset testing

### FEATURES

- Switch signals DC to 26.5 GHz
- Microwave building blocks are pluggable from the front
- Building blocks range from dual SPDT relays to SP6T relays, transfer switches and relay drivers
- Competitively priced to suit OEM/system integration model

## Integrated ICA and Switching Mainframe

### FEATURES

- Integrated receiver and switch modules eliminate lossy cabling
- 14 high-density switch and I/O slots
- Integrated analog backplane expands measurement capability
- Matrix switching allows for flexible use of receiver I/O
- 270 V dc power option

The EX1200-ICA is an 8U signal switching mainframe with 6U tall plugin cards with integrated receiver modules. It is used at the core of the US Navy CASS program as the enhanced general purpose interface subsystem.

These receiver modules greatly simplify cabling and maintenance, and also improves performance by eliminating cable losses between switch system and receiver.

The EX1214-ICA has access points in the rear that can be used to interface the I/O to internal test system resources such as spectrum analyzers and RF synthesizers. It also has a removable power supply that supports AC/DC inputs with remote enable/disable.

EX1214-ICA	14-Slot, 8U mainframe
EX1200-2011ICA	12 SPDT 12 A and 5 SP4T 5 A power switch module
EX1200-6100ICA	1 GHz coax switch module, 11 SP4T, 3 SPDT
EX1200-5111ICA	250 V/2 A switch module, 21 SP4T, 35 SPDT
EX1200-4464ICA	64-channel, coax hybrid star/matrix switch module

### CUSTOM INTEGRATION SERVICES

VTI employs an innovative, modular approach to our standard product designs that allows us to quickly make customer-requested modifications that address specific application requirements. These 'custom' products are then documented and supported just like our standard products. This relieves our customers of the burden of managing a custom development project and the associated long-term support issues, while helping them optimize their size and overall cost.

### SYSTEM-LEVEL EXPERIENCE

Our application engineering team has years of experience in integrating a wide range of instrumentation products into larger test systems. We work with customers during the project definition phase to help architect solutions that best meet the application requirements. Our expert knowledge of industry standards, such as LXI, VXI, IVI, PXI and VME, at the hardware and software level has helped test developers reduce the time to 'system readiness' in the following applications:

- DATA ACQUISITION
- FUNCTIONAL / AUTOMATED TEST
- SIGNAL SWITCHING AND DISTRIBUTION

It is with this experience that we are able to provide our customers with a world-class selection of automated test and data acquisition solutions.

### SERVICE AND SUPPORT

VTI Instruments has a worldwide sales, service, and support infrastructure, along with a staff of applications and technical sales people who have years of experience configuring and specifying test requirements. By utilizing state-of-the-art technology in all phases of product development, VTI Instruments is able to provide a level of worldwide support that is unique in the industry.

VTI is committed to preserving our customers' initial capital investment in our products through a dedicated sustaining engineering program that continuously designs out component obsolescence. This approach enables us not only to enhance products, but also to considerably extend their life and support cycles. We strive to maintain hardware and software backward compatibility with our installed base whenever possible so as not to impact our customers' existing test program sets.
