• Redefining Transport Testing

## Market Situation—Historical

- Core network had multiple metro/access network subsets
  - Much of the network coming to the access network was muxed up to a larger metro network which was muxed up to the core network.
    - Not all traffic was transferred to the core, but a large percentage was.
    - To a large extent, the core was the size of the combined metro networks.

Back to

# Market Situation—Current and Future

- Metro networks becoming same or larger size than core
  - Many services now require "near" real-time response (simultaneous multiple access to data)

Metro

- Transferring data long distances to server not ideal
- Many services to many millions of users (apps) now truly global (apps)
  - A single or even two servers (back-up) isn't good enough to handle data
- Many services require very large data from millions of users (video)

Back to

# **Out-of-Service Installation Testing**

- Installing and commissioning new lines
  - Verify new-line quality/performance before service commissioning
- Troubleshooting with test traffic
  - Test network functions under different loads
- Testing line quality
  - Perform far-end loopback tests using cable or special configuration (protocol dependent)

Back to

# **Out-of-Service Installation Testing**

- One-way testing using two instruments
  - Separate results for each line direction
  - Performed between MT1000A and MT1000A

MT1000A

MT1000A

Back to

# **Out-of-Service Installation Testing**

- Efficient simultaneous out-of-service testing of up to two lines
  - Supports up to two fully independent ports at all rates

Back to

# **Out-of-Service Testing**

- Network element
   installation/commissioning
- Error-performance measurements
- Propagation-time measurements
- Alarm, error, slip and frequencydeviation measurements
- System stressing through generation of alarms, errors, slip and frequency offset

# In-Service Troubleshooting and Analysis

- Monitoring both line directions simultaneously to troubleshoot communications path problems
  - Optimum communications requires smooth data transport in both directions

Back to

# MT1000A Key Applications

- Carrier Class Ethernet I&M and troubleshooting
  - Ethernet testing up to 100 GigE
  - Include RFC 2544, and Y.1564
  - Include RFC 6349 (Up to 10Gbps)
  - Ethernet OAM
  - MPLS-TP and PBB
  - IP Channel statistics
  - Frame capture for advanced troubleshooting
- Core and Metro networks I&M
  - OTN up to OTU4
  - Mapping of Ethernet/CPRI/SDH/SONET/Fibre Channel client signals, multistage mapping
  - FEC (Forward Error Correction) and O.182 Poisson error insertion
- Mobile Backhaul installation and verification
  - Synchronous Ethernet testing up to 10 GigE (ITU-T G.826x and IEEE 1588 v2)
- Mobile Fronthaul installation and verification
  - CPRI testing up to 10 Gbps
  - OBSAI testing up to 6 Gbps
  - eCPRI/IEEE 1914.3 up to 100 Gbps

# MT1000A Key Applications

Back to

- Powerful Storage Area Networking (SAN) testing
  - Fibre Channel up to 16 Gbps
  - Supports throughput, latency, and buffer credit performance verification
- Quick and easy testing of SDH/SONET, PDH/DSn Networks
  - SDH/SONET up to STM-64/OC-192
  - PDH/DSn (E1, E3, E4, DS1, DS3)
- Fiber endface inspection using VIP (Video Inspection Probe)
- Dual port at 10 Gbps rates
  - Reduced testing time by simultaneous testing of two lines with one unit
  - In-service bi-directional monitoring

# MT1000A Key Benefits and Features

- Easy intuitive GUI
  - Large 9-inch touch screen
  - Eight languages (English, Chinese, Japanese, Korean, German, French, Russian and Spanish)
- WLAN<sup>\*1</sup>/Bluetooth/LAN connectivity
- PDF, CSV and XML report generation for documentation of test results
- Remote operation
  - Using VNC or dedicated GUI operation software
  - Via Ethernet, WLAN
- Remote control (scripting) via Ethernet, WLAN, GPIB
- Hand-held product
  - Compact and lightweight design for maximum portability in field
  - Clam shell (single module installation)
  - Modular platform ensures maximum return on investment
- Battery-operated
- High performance in small form factor

<sup>\*1</sup> Available for certified countries, including USA, Canada, Japan, all EU countries

|-----------------|----------------------|
|-----------------|----------------------|

This bag with shoulder strap can hold the MT1000A with up to three installed modules.

\*1: The presence of the MT1000A-006 option can be recognized at the top right of the front panel. To retrofit to the already shipped item, please contact us.

Without MT1000A-006

\*2: One line cord is attached to the area to shipment. \*3: Composed of B0720A, B0729A, B0730A and B0731A. Refer to Module Composition for the module combination. \*4: The MT1000A with MT1000A-006 can be used. Use the AC adapter when

using the MT1000A without MT1000A-006 installed. \*5: Shoulder strap for MT1000A.

With in MT1000A-005

- \*6: Hand strap for MT1000A.
- \*7: This DVD includes PDF files and formatting tools of each product's instruction manual (such as W3933AE, W3810AE, W3736AE, W3946AE).
- \*8: Available for certified countries and regions including USA, Canada, Japan and EU countries. Please visit the Anritsu web site for updated information.
- \*9: MT1000A-005 is required for MU100090A. To retrofit to the already shipped item, please contact us.
- \*10: Can use module 1 to 2 in combination
- \*11: Includes 4 bolts of same length
- \*12: Includes B0729A, B0730A and B0731A

| 4: Up to four SEP                           | +/SEPs can be stored                     |      |  |  |  |  |  |

#### Notes:

- \*1: The channel is not related to the physical port position. The user can freely choose either of the two physical ports assigned to the option via software. For a dual channel setup, the two different ports of one protocol can operate simultaneously, or two different single channel options can operate simultaneously.
- \*2: Please see the datasheet for supported OTN mapping.
- \*3: When using the OTN function, the channel can be used as client signal mapped to OTN. For example, when mapping STM-64/OC-192 to OTU2, both the MU100010A-051/052 (for physical port) and the MU100010A-081/082 (for client signal) are required.
- \*4: When the ODU Multimapping option is installed, OTN multistage mapping measurements are supported. This one option supports both single channel and dual channel.
- \*5: When the ODU Flex option is installed, since transport is over OTN networks, mappings based on used ODU Flex standard can be measured. This one option supports both single channel and dual channel.

#### Notes:

\*1: The channel is not related to the physical port position. The user can freely choose either of the two physical ports assigned to the option via software. For a dual channel setup, the two different ports of one protocol can operate simultaneously, or two different single channel options can operate simultaneously.

Back to

- \*2: Please see the datasheet for supported OTN mapping.
- \*3: When using the OTN function, the channel can be used as client signal mapped to OTN. For example, when mapping 100G Ethernet to OTU4, both the MU100011A-055 (for physical port) and the MU100011A-015 (for client signal) are required.
- \*4: When the ODU Multiplexing/Multistage option is installed, OTN multistage mapping measurements are supported. This one option supports both single channel and dual channel.
- \*5: This mapping function is based on the ODUFlex standard for transmissions over OTN networks and supports client signals of any speed.
- \*6: The MU100011A has no STM-256/OC-768 PHY interface; it can be used for OTN client signals.

| Model/Order No. | Name   |
|-----------------|--|
| MU100090B*1     | High Performance GNSS Disciplined Oscillator |
| MU100090B-001   | High Stability/Multi-Band                    |
| MU100090B-002   | Multi-GNSS                                   |
|                 | Standard Accessories                         |
| J1705A          | AUX Conversion Adaptor                       |
| J1886A*2        | GNSS Antenna                                 |
| J1710A          | BNC Cable (20 cm) × 2                        |
| Z2122A          | Tripod for GNSS Antenna                      |

\*1: Excellent Eco Product non-compliant.

\*2: With 5 m cable, IP67 Ingress protection.

MT1000A-005 is required for MU100090B.

#### Transport Test Accessories

| Model   | Name  | Notes   |
|---------|---|---|
| GD325A  | GP5 Receiver                                      | It is required when measuring one-way latency at Ethernet tests.<br>However, it is unnecessary when purchasing MU100090A. |
| W3933AE | MT1000A Transport Module Operation Manual         | Printed manual  |
| W3736AE | MT1000A/MT1100A Remote Scripting Operation Manual | Printed manual  |
| Z1821A  | Utilities in USB Stick                            | USB memory with operation manual, remote scripts instruction manual, etc.   |
| J1583A  | Optical Attenuator 10 dB LC/PC to LC/PC           |   |
| J1584A  | RJ45 Cable 3 m                                    |   |
| J1585A  | RJ48 to Crocodile Clips Cable 3 m                 | E1 interface cable.   |
| J1586A  | RJ48 to Crocodile ClipsCable 20 dB ATT 3 m        | E1 interface cable.   |
| J1588A  | BNC Cable 2.5 m                                   | E1, E3, E4, DS3, STM-1e, STS-3 interface cable. Impedance: 75Ω  |
| J1589A  | BNC to 1.6/5.6 Cable 2.5 m                        | E1, E3, E4, D53, STM-1e, STS-3 interface cable. Impledance: 75Ω   |
| J1591A  | RJ48 to Two 3-pin Banana Plug Cable 2.5 m         | E1 interface cable.   |
| J1597A  | RJ48 Balanced PDH Cable Crossed 3 m               | E1 interface cable.   |
| J1598A  | Bantam Cable 3 m                                  | DS1 interface cable.  |
| J1710A  | BNC Cable D.2 m                                   | BNC cable for MU100090A and main-frame external clock input connector.<br>Impedance: 500                                  |
| JD1278  | COAXIAL CORD, 2.0 M                               | BNC cable for MU100090A and main-frame external clock input connector.<br>Impedance: 500                                  |

#### • Warranty Products

| Model/Order No. | Name                              |
|-----------------|-----------------------------------|
| MT1000A-ES210   | 2 Years Extended Warranty Service |
| MT1000A-ES310   | 3 Years Extended Warranty Service |
| MT1000A-ES510   | 5 Years Extended Warranty Service |
| MU100010A-ES210 | 2 Years Extended Warranty Service |
| MU100010A-ES310 | 3 Years Extended Warranty Service |
| MU100010A-ES510 | 5 Years Extended Warranty Service |
| MU100011A-ES210 | 2 Years Extended Warranty Service |
| MU100011A-ES310 | 3 Years Extended Warranty Service |
| MU100011A-ES510 | 5 Years Extended Warranty Service |
| MU100090A-ES210 | 2 Years Extended Warranty Service |
| MU100090A-ES310 | 3 Years Extended Warranty Service |
| MU100090A-ES510 | 5 Years Extended Warranty Service |
| MU100090B-ES210 | 2 Years Extended Warranty Service |
| MU100090B-ES310 | 3 Years Extended Warranty Service |
| MU100090B-ES510 | 5 Years Extended Warranty Service |

Network Master Pro MT1000A

 Carrier Class Ethernet Installation and Troubleshooting

Back to

# MT1000A Product Highlights

- Easy Ethernet test solution
  - Ethernet testing
    - at 100 Gbps, 40 Gbps, 25 Gbps, 10 Gbps, 1 Gbps, 100 Mbps and 10 Mbps
  - Traffic generation up to full line rate
  - Supports IPv4 and IPv6
  - Ethernet Service Activation Test (Y.1564)
  - Automated RFC 2544 testing
    - Throughput
    - Frame Loss
    - Latency or Packet Jitter
    - Burstability
  - TCP Throughput option (RFC 6349) (Up to 10 Gbps)
  - BER testing
    - Includes frame loss and sequence error tests
  - Service disruption measurement

# MT1000A Product Highlights

- Easy Ethernet test solution—continued
  - Comprehensive statistics including:
    - Performance (utilization, Throughput, frame rate)
    - Frame statistics (frame types and errors)
    - Burst statistics
    - Frame size distribution
    - Latency and Packet Jitter measurements
    - Transmitted and received frames and bytes
  - Filters to extract relevant parts of traffic
  - Thresholds to highlight abnormal situations
  - Simultaneous monitoring of both line directions
  - IP Channel Statistics to identify error streams, top talkers, network attacks for up to 230 multiflow counters
  - Ethernet OAM: IEEE 802.3 (IEEE 802.3ah), IEEE 802.1ag, ITU-T Y.1731

# MT1000A Product Highlights

- Easy Ethernet test solution—continued
  - Synchronous Ethernet Test (G.826x and IEEE 1588 v2) (Up to 10G bps)
    - For Mobile Backhaul testing
  - Ethernet Multistream: Up to 16 streams per port
    - Information on Throughput, Frame Loss, Packet Jitter and latency per stream
  - Stacked VLAN (Q-in-Q): Up to 8 levels of VLAN tags
  - MPLS/MPLS-TP testing: Up to 8 levels of MPLS labels
  - PBB testing
  - 10G WAN PHY
  - Ping testing
  - Traceroute test
  - Electrical cable test and optical signal level indication
  - Frame capture for protocol analysis by Wireshark®

Back to

# MT1000A Applications – Out-of-Service Testing

- Out-of-service Ethernet testing
  - Installation and commissioning of new lines
    - Verification of quality/performance of new lines before commercial operation
  - Troubleshooting with test traffic
    - Functional testing and network behavior at different loads
  - Testing line Quality of Service (QoS)
    - Loop-back MT1000A Ethernet test signal using cable or reflector at far end

Ethernet testing with far-end reflector

# MT1000A Applications – Out-of-Service Testing

Back to Index page

- Ethernet end-to-end testing
  - Due to nature of IP/Ethernet networks key parameters like Throughput, Frame Loss and Packet Jitter may differ in two directions of connection
    - Two instruments needed to capture data for each direction

# MT1000A Applications – Out-of-Service Testing

- Typical applications<sup>1</sup>:
  - Dual-port testing of networks or network elements
  - One-way latency measurements
  - Router testing
  - QoS verification

<sup>1</sup> Requires 10 Gbps dual-port option

Back to

# MT1000A Applications – In-Service Monitoring

- Typical applications<sup>1</sup>:
  - Rapid in-service diagnostics
  - In-service troubleshooting
  - Live traffic analysis and statistics

<sup>1</sup> Requires 10 Gbps dual-port option

MT1000A in Pass-through mode

Back to

- IP Channel Statistics
  - Typical root causes of network issues
    - Top talker
      - Top talker occupies major bandwidth slowing it down
    - Network attack
      - One node accessed from many sites, occupying network
    - Error Frames
      - Error frames causes re-transmission and wasted network capacity

Back to

- IP Channel Statistics
  - Finding top talker, network attack, and error frames quickly decreases downtime and recovers network performance
  - IP Channel Statistics offers simple method to top talker, network attack, and error frames just by selecting and starting filters
  - Field technicians analyze network easily without training

| Analysis       | IP Channel Stats Filter |
|----------------|-------------------------|
| Top talker     | Source IP address       |
| Network attack | Destination IP address  |
| Error frames   | (any parameter OK)      |

Back to

- IP Channel Statistics
  - Combination of filters
    - IPv4, IPv6 or MAC address, VLAN ID or MPLS label, IP next header (protocol), TCP/UDP ports
  - Monitoring values
    - Frame counts/rate, Throughput, Error frames, Size distribution, IPv4/IPv6 statistics, TCP/UDP statistics, etc.
  - Added value of IP Channel Statistics
    - VLAN scan
      - Throughput per VLAN ID monitored by selecting VLAN ID as filter

Back to

- Setup screen for configuring channel definitions and displayed columns
- Result screen
  - Easy switching between results from two ports

| Definitions              | Statistics           |                  |                               |

# MT1000A Signal Level Display for Optical Ethernet

- Some problems on optical Ethernet connection are basic:
  - Bent cables
  - Breaks in cable
  - Dirty connectors
- Optical signal level display easily identifies such problems

- What is ITU-T Y.1564?
  - Anritsu actively involved in creating Y.1564 standard
  - Defines new method for testing multiple Ethernet services on network simultaneously
  - Designed to allow service providers to assess customer end-to-end network performance including:
    - End-user traffic profiles with multiple frame sizes
    - Services with different traffic priorities on network
  - Verifies following for each surface:
    - Frame Loss, transfer time and jitter across network
    - Policing
    - Network ability to manage short-duration traffic bursts

Back to

- What is ITU-T Y.1564?
  - ITU-T Y.1564 completes testing in two phases:
    - Phase 1: Service Configuration Test—confirms each service configured correctly throughout network at Committed Information Rate (CIR), and others rates as required
    - Tests one service at a time

Back to

- What is ITU-T Y.1564?
  - ITU-T Y.1564 completes testing in two phases:
    - Phase 2: Service Performance Test—Transmits one or many services simultaneously at CIR confirming all traffic can transverse network under full service load
    - Default test time: 15 minutes, 2 hours, or 24 hours

Back to

- What is ITU-T Y.1564?
  - Test configurations:
    - One-way test, using two testers
      - Provides individual results for each direction
      - "Preferred configuration" in Y.1564

Rx

 How to synchronize two instruments to test one-way FTD (Frame Transfer Delay) is an issue.

- Round-trip test
  - FDV (Frame Delay Variation) may be irrelevant

LAN

Back to

- What is ITU-T Y.1564?
  - RFC 2544 often used for Service Activation Test
    - Not intended use for RFC 2544:
      - "Benchmarking Methodology for Network Interconnect Devices"
      - Defines number of tests used for describing performance characteristics of network devices
  - Y.1564 intended for Service Activation Test

| Item                | ITU-T Y.1564                      | RFC 2544                       |
|---------------------|-----------------------------------|--------------------------------|
| Designed for        | Service activation                | Device performance             |
| Concurrent services | Multiple services simultaneously  | One service at a time          |
| Simulates           | Realistic network                 | One service on network         |
| Testing time        | Short due to simultaneous testing | Long due to sequential test of |
|                     | of services                       | parameters and services        |
| Test result         | Directly related to SLA           | Link performance limit         |
|                     | requirements                      |                                |

Back to

- Supports tests specified in Y.1564
- Features:
  - Two-step test based on:
    - Bandwidth profile parameters: CIR, EIR, CBS, EBS
    - Performance parameters: FTD, FDV, FLR, AVAIL
  - Includes support for CM ("Color Aware") and EMIX
  - Local-Remote operation
    - One-way test results using two MT1000A units
    - GPS add-on option for one-way FTD measurements
  - Round-trip measurements

Back to

- Results
  - On instrument display
    - Easy-to-understand GO/NO GO display
    - Full result details also available
  - As pdf reports

- 10 Types Max.
- Setting range of 50 ~ 16000 bytes
- Ideal for Latency and Burst measurements

Can flexibly measure multiple Frame sizes with one sequence to check device-unique properties for Frame-size related specifications, such as Maximum Transmission Unit (MTU), etc., to support easy Boundary Testing of Frame size-dependent properties.

#### – <u>Useful Point !</u>

Although only one size can be measured in the Constant mode, measuring multiple sizes shortens the measurement time and simplifies comparison of measurement results between sizes.

#### MT1000A RFC 2544 Reporting

- Report tables are organized like the GUI with Tx row followed by Rx row, making it easy to find faulty test areas with Frame loss.
  - New tables display per-port test results before actual results tables.

Users can quickly identify combinations of Frame sizes and utilizations with problems.

RFC 2544 graphs same as GUI

PDF reports are displayed with the built-in PDF viewer

RFC 2544 Summary section with new table showing which tests completed

# Benefit of RFC 2544 End-to-End Test

• Typical test set-up with one instrument and reflector or loopback OK for symmetrical links:

- For Ethernet links carried over asymmetrical connections (xDSL, WIMAX) throughput tests only reflect performance of link direction with lowest capacity
- Symmetrical typical test set-up does not identify transmission performance differences between two link directions

Back to

# MT1000A RFC 2544 End-to-End Test

- RFC 2544 end-to-end test with Local–Remote relationship
  - Needed for test of Ethernet links over asymmetrical connections
  - Identifies transmission performance differences between two directions in link
  - User sets test at local instrument which exchanges set-up and results with remote instrument to be controlled
  - Tests Throughput, Frame Loss and Burstability
  - Tests two lines simultaneously

Back to

# MT1000A Ethernet Ping Test

- Ping test applications:
  - Installation and commissioning
  - Troubleshooting and maintenance
- Popular tool for testing:
  - Continuity
  - Connectivity
  - Response time

# MT1000A Ethernet Traceroute Test

- Traces IP route over IP network
- Ping timing data per hop

Back to

# MT1000A Ethernet BER Tests

- Traditional test of physical connection
- Generates and detects test patterns
- Counts errors in received test pattern
- Color-coded errors and alarms for easy overview
- Pattern generation:
  - Unframed
  - Layer 2 (Mac address)
  - Layer 3 (with IP header)
  - Layer 4 (with UDP/TCP header)
- Detects sequence errors and loss of sequence synchronization
- Frame loss count and frame loss seconds

Why Service Disruption on Ethernet Links?

Back to Index page

- Many Ethernet links carried over OTN/SDH/SONET via backbone network
  - OTN/SDH/SONET networks sometimes have Automatic Protection Switching (APS)
  - If OTN/SDH/SONET network line fails, APS switches traffic to working line
  - Switch and service disruption should be completed in less than 50 ms

# MT1000A Service Disruption Measurement

- Service disruption can be measured as part of BER test
  - Using far-end loopback or two MT1000A testers
  - Max. acceptable service disruption time can be set
    - Color-coded results when max. time exceeded

# MT1000A Latency and Packet Jitter Measurements

- Latency and packet jitter can cause problems for real-time services like VoIP
  - Part of statistical measurements
  - User selects included information

Back to

# Benefit of Ethernet Multistream Test

- Back to Index page
- By sending several traffic streams with different priority settings, the user can verify that high-priority traffic is transported better (i.e. has lower frame loss) through a congested network than low-priority traffic.

- VoIP traffic is often given high priority to ensure service quality
  - Sometimes DSCP/TOS byte used to give high priority
  - Other times high priority given to selected TCP/UDP ports
- Some operators allocate certain traffic capacity to each traffic type on link with limited capacity
- User can verify that each traffic types gets allocated capacity by sending several traffic streams with different type indications
  - Traffic type indicated by VLAN tags

# MT1000A Ethernet Multistream Test

- Using MT1000A, user can generate up to 16 streams per port on Ethernet link
  - Individual settings for traffic load and header information for streams, including DSCP/TOS byte and TCP/UDP port numbers for each stream

Stream Selector and Overview

Back to

# MT1000A Ethernet Multistream Test

 Multistream function displays frame loss for up to 16 streams per port, making it easy to spot whether high-priority traffic has lower frame loss than low-priority traffic

Back to

# Simple Stream Address Creation

• When generating Ethernet and IPv4/v6 test Frames, a function supports creation of [Increment], [Decrement], and [Random] streams for the address specified location, resulting in shorter test setting times.

Back to

# Ethernet function for broadcast packet networks

The following functions are supported for measuring broadcast packet networks.

- IGMP/MLD client function for multicast group Join/Leave
- IEEE1588V2 (PTP) SMPTE 2059-2 profile for video streaming IP upgrade

Adding end-to-end test for broadcast packet networks assures QoS evaluations using throughput and one-way latency measurement at network installation, as well as easy and efficient network maintenance.

Only one unit is all that is necessary to evaluate video streaming network time synchronization performance and check time synchronization protocols.

#### VLAN Background

Back to Index page

- Virtual Local Area Networks (VLANs) IEEE 802.1Q
  - Segment LAN on organizational basis, by functions, project teams or applications
    - Each VLAN has ID and priority
      - 802.1p priority bits (3) segment traffic into eight Classes of Service (CoS), enabling traffic differentiation
      - 12-bit ID supports 4096 VLANs
- Stacked VLAN ("Q-in-Q") IEEE 802.1ad
  - VLAN carried on VLAN
    - Method to provide more VLAN IDs
    - Allows service provider to carry customer VLAN traffic transparently service provider VLAN
    - Sometimes service provider and/or customer use more than one VLAN tag

## MT1000A Ethernet Stacked VLAN Function

- Insert up to eight layers of VLAN tags into Ethernet frame
  - Can be combined with Multistream function
  - Special layer naming when two layers selected
    - S-VLAN Service provider VLAN
    - C-VLAN Customer VLAN

Back to

#### MPLS Background

Back to Index page

- Multi-Protocol Label Switching (MPLS)
  - Carries data; considered to be between Layer 2 (Data Link Layer) and Layer
     3 (Network Layer); often called "Layer 2.5".
  - Simplifies point-to-point routing
    - MPLS header has one or more 'labels' (label stack) and each label has four fields:
      - 20-bit label value
      - 3-bit field for QoS priority
      - 1-bit bottom of stack flag
      - 8-bit TTL (time to live) field
- EoMPLS (Ethernet over MPLS) or PWE3 (Pseudo-Wire Emulation Edgeto-Edge)
  - Defines method to transport Layer 2 protocol across MPLS network

### MT1000A MPLS/MPLS-TP Function

- Stacked MPLS generation
  - Inserts up to 8 layers of MPLS labels into Ethernet frame
  - Can be combined with Multistream facility
  - EoMPLS Control word can be added with MPLS-TP

Back to

#### MT1000A MPLS-TP Function

- MPLS-TP information:
  - Activation of MLPS-TP OAM function

Back to

#### MT1000A PBB Function

- PBB (Mac-in-Mac) information:
  - Counts PBB frames at result page
  - Can be combined with Multistream facility

#### MT1000A TCP Function

- Set TCP connections before sending traffic with TCP headers
  - Allows traffic to pass firewalls using "state-full inspection"
  - Limited implementation:
     For example:
    - No retransmissions
    - No flow control

## MT1000A Ethernet Traffic Generator

- Ramp traffic: Increases traffic automatically until max. capacity exceeded
  - Programmable per stream
- Burst Traffic: Continuous sending at specified conditions
- Generate Tx rates above 100%
- Data type profiles (data, video, voice)

## Custom Editing of Ethernet Header

- Free editing of the Ethernet Header in the Frame stream settings to support special protocols for R&D.
  - This function can be used with the following applications:
    - Ethernet BERT Application

# Link Fault Signaling (LFS) Emulation

- Enables/disables LFS Emulation for MU100011A 10GbE and faster interfaces
  - When enabled
    - A) Sends RF when LF detected (LF Rx or Link down, etc.)
    - B) Sends Idle signal when RF detected during Tx streaming; sends stream when RF released

- When disabled (or using V9.11 or earlier)
  - Does not send RF when LF detected (LF Rx or Link down, etc.); Tx side unaffected
  - Tx side unaffected whether RF detected or not

Back to

## Network Discovery and In-band Control

- No Need for Two Engineers for End-to-end Test
  - One engineer controls both local and remote testers without dedicated LAN for remote access
  - Testing from one end cuts OPEX
- Process
  - Discover other "Network Master(s)" on network
  - Remote-control far-end tests, such as RFC2544, Y.1564, Reflector (L2/L3/L4 loopback) etc.
  - Generate report at local controller with results summarized at both local and remote testers

Back to

## Validating PCS at 10 GbE

- Validating PCS operation at the 10 GbE interface to support fast troubleshooting in the PCS layer:
  - Error/Alarm Insertion
  - Error/Alarm Display/Count
  - Native 10G LAN PHY is supported

| Alarms/Errors          | /Othe  | rs             |  |   |
|------------------------|--------|----------------|--|---|
| Port 1                 |        | Ethernet PCS a | larms/errors   |   |

 Does not support Stimuli function Invalid alignment marker/BIP error

#### 10G WAN PHY Background

• 10G WAN PHY

Mapping Ethernet frames to SONET/SDH

Back to Index page

## MT1000A 10G WAN PHY Function

- WAN results
  - Bi-directional overhead byte capture (requires dual-port version)
  - Error and alarm statistics on WAN part of signal with Ethernet BERT application

Back to

## MT1000A 10G WAN PHY Function

- WAN overhead byte generation
  - User programming of transmitted OH bytes
  - SDH or SONET terminology

Back to

Network Master Pro MT1000A

• TCP Throughput Option (RFC 6349) (Up to 10 Gbps)

- Optimized performance essential in modern communication networks
- IP network operators can test networks based on IETF RFC 2544 and ITU-T Y.1564
  - Even when network seems fine at these tests, customers may complain that achieved throughput below agreement with operator
  - Can be caused by non-optimal configuration of Transmission Control Protocol (TCP) providing higher-layer connections through network, or badly configured network element burst size settings
- TCP adds reliability to communication over IP network because data receiver acknowledges packets received correctly
  - To support this, network elements have buffering
    - Data throughput reduced if buffering sizes incorrect
- Operators use RFC 6349 test methodology to optimize TCP throughput

Back to

# RFC 6349 Testing – Benefit of TCP Throughput Test

• Eliminate end-user factors from test by emulating TCP host Bi-directional TCP throughput test by emulating end user hosts

- MT1000A TCP throughput test hardware based
  - Always validate maximum TCP throughput potential possible on customer's network
  - Repeatable tests with consistent results
- MT1000A can perform bi-directional TCP throughput testing
  - More realistic test result
  - MT1000A can test up to four ports simultaneously
  - Can shorten multiple network commissioning test time

Back to

- TCP performance verification using RFC 6349 test methodology
- Client and server modes
- Connect to iPerf server as client
- Automated or manual testing
  - New installation mode
  - Troubleshooting mode
- Simultaneous bi-directional testing with independent settings
- Configuration of TCP Throughput (RFC 6349) test

• Ethernet OAM Functionality

#### Ethernet OAM background

- Ethernet moved from LAN technology to Carrier Class technology
- Ethernet Operations, Administration and Maintenance (OAM) developed to:
  - Ease operations, administration, and maintenance of complex Ethernet networks
  - Reduce operational expenses
- Ethernet OAM covers:
  - Link fault management
  - Connectivity fault management
  - Performance monitoring

# Ethernet OAM Layers

| OAM layers         | Functions   | Standards                              |
|--------------------|---|--|
| Transport layer    | Ensures bi-directional communication between two<br>directly connected devices<br>Focuses on Ethernet First Mile (EFM)<br>Link fault management           | IEEE 802.3 (now includes IEEE 802.3ah) |
| Connectivity layer | Monitors path between two devices not directly<br>connected<br>Connectivity fault management incl. Link trace,<br>continuity check and loopback protocols | IEEE 802.1ag<br>ITU-T Y.1731           |
| Service layer      | Monitors status of services as seen by customer<br>Performance monitoring including Frame Loss,<br>Frame Delay and Throughput measurements                | ITU-T Y.1731                           |

## Ethernet OAM Y.1731 and IEEE 802.1ag

- Y.1731 and IEEE 802.1ag similar
  - Supported by both Y.1731 and IEEE 802.1ag:
    - Connectivity fault management
  - Supported by Y.1731 only:
    - Performance monitoring
  - Same frame format for OAM PDUs (Protocol Data Units)

#### Ethernet OAM IEEE 802.3ah

- Ethernet OAM IEEE 802.3ah functions:
  - Remote failure indication during fault
  - Remote loopback mode ("Real" loopback)
  - Fault isolation
  - Link performance and status monitoring
  - OAM discovery mechanism
    - Determines whether remote device has OAM enabled and configured parameters and supported functions compatible with requesting device
  - Optional activation of OAM
    - OAM can be enabled on ports subset or all ports
  - Extension mechanism
    - Available for higher-level management applications

Network Master Pro MT1000A

- Mobile Backhaul Installation and Verification
  - Synchronous Ethernet Test
  - Phase/Time Synchronization Test

### Synchronous Ethernet Test

(Up to 25 Gbps)

- Recently Ethernet become dominant technology for data transmission, due to simplicity and low cost
  - Started as LAN (Local Area Network) technology but now used for end-toend communications
- Synchronous networks (PDH, SDH/SONET) migrating to Ethernetbased packet-switched network (PSN) are used for Mobile Backhaul network (MBH).
- Asynchronous nature of Ethernet causes challenges:
  - Mobile networks have strong requirement for frequency synchronization across entire network
  - TDD and LTE-Advanced technology pushes requirement for phase/time synchronization to the Ethernet-based MBH.

## Synchronous Ethernet Test

- Synchronization can be applied to Ethernet-based packet networks using Synchronous Ethernet
- Techniques under consideration for Ethernet synchronization are:
  - Physical synchronization signal forwarding as defined in ITU-T recommendations G.8261, G.8262 and G.8264 (in many cases now called SyncE)

- Packet-based synchronization as defined in IEEE1588 v2 Precision Time Protocol (PTP)
  - ITU-T G.8265.1 telecom profile for frequency synchronization
  - ITU-T G.8275.1 telecom profile for phase/time synchronization

Back

# MT1000A Synchronous Ethernet Test

- SyncE (ITU-T G.826x) functions:
  - Detect ESMC messages and real time display of received SSM/QL byte
  - Record ESMC message log
  - Generate alarm when SSM/QL not received within 5 seconds
    - Clear alarm on SSM/QL reception
  - Transmit ESMC/SSM messages with user-defined QL
    - Four user-selectable QL interpretations
  - SyncE recovered frequency monitor and synchronized packet generation.

- SyncE (ITU-T G.826x) results (per port):
  - Status information:
    - Rx SSM QL (current value)
  - Statistics on SSM QL messages and values

- (Up to 25 Gbps)
- Back to Index page

- IEEE 1588 v2 (PTP) functions:
  - Support G.8265.1, G.8275.1 and G.8275.2 profile and 'User defined' one.
  - Emulating a master clock.
    - Selectable UTC source from internal instrument clock or GPS.
    - Configurable parameters of Announce message, etc.
  - Emulating slave clock
    - Configurable parameters of message interval, etc.
    - Best master clock algorithm (BMC)
  - Supported encapsulations: PTP-UDP-IP(IPv4 and IPv6) and PTP-MAC
  - Support stacked VLAN and MPLS
  - Real time PTP signaling sequence in ladder chart, off-line analysis by PCAP file capture, message statistics, message rate measurement.

For quick analysis and troubleshooting of IEEE 1588 v2 (PTP) signaling

- IEEE 1588 v2 (PTP) results statistics on:
  - Offset and offset variance
  - Path Delay Variation (PDV)
  - Messages
  - Clock state transitions

- CDMA2000 and W-CDMA(TDD) require not only frequency synchronization but also phase/time synchronization among base stations. GPS has been used for that purpose.
- Expanding small cell deployment and technologies of LTE-TDD and LTE-Advanced cause increasing demands for packet-based phase/time synchronization by IEEE1588v2.
- New testing demands for mobile network installation and maintenance using IEEE1588v2 are rapidly increasing.

Distribution of Sync Signal to Base Stations

| Application          | Mobil     | e Backhaul      | Air In    | terface                   |
|----------------------|-----------|-----------------|-----------|---------------------------|
|                      | Frequency | Phase           | Frequency | Phase                     |
| LTE FDD              |           | N/A             |           | N/A                       |
| LTE TDD (large cell) |           | ±1.1µs          |           | ±5µs                      |
| LTE TDD (small cell) | .46       | ±1.1µs          | .50       | ±1.5µs                    |
| LTE-A MBSFN          | ±16ppb    | ±1.1µs          | ±50ppb    | ±1 to 5µs                 |

Synchronization requirement to MBH

Core Network

Back to

(Up to 25 Gbps)

- MT1000A is located at the service demarcation point between mobile backhaul and mobile service. It evaluates SLA of the backhaul.
- MT1000A measures max|TE|, cTE(Constant Time Error) and dTE(Dynamic Time Error) as metrics of phase/time synchronization.
- Supports GbE, 10GbE and 25GbE optical interfaces.

- (Up to 25 Gbps)
- Back to Index page
- Time Error method No.1: 1PPS Signal phase measurement Measuring the phase difference between the reference in the tester and 1PPS signal from the network under test.

Back to

Index page

- Time Error method No.2: By PTP timestamp (defined in ITU-T G.8273)
  - The tester emulates slave clock and has reference UTC from GPS.
  - The tester measures the difference between the timing of PTP message reception and the time

stamp inside the message (T1 and T4). This is observed as OWD(One-Way-Delay) .

- Because cable length is known the tester estimates the time error by deducting the cable delay from the OWD.

T-GM

(Up to 25 Gbps)

• MU100090B High Performance GNSS Disciplined Oscillator is required for phase/time synchronization test.

Network Master Pro MT1000A

- Mobile Fronthaul Installation and Verification
  - CPRI/OBSAI Test
  - eCPRI/IEEE 1914.3

#### **CPRI** Background

- Operators supporting explosive spread of smartphones and tablets by increasing bandwidth of mobile communications networks
- Driving complete change in mobile communications systems
  - Adoption of Centralized-Radio Access Networks (C-RAN).
    - Using C-RAN, the mobile fronthaul is configured from centralized Base Band Units (BBU) and multiple Remote Radio Head (RRH) units connected via general-purpose interfaces, such as the Common Public Radio Interface (CPRI) or Open Base Station Architecture Initiative (OBSAI).

#### **CPRI Bit Rates**

Back to Index page

- CPRI bit rates are referred to as "option #"
- There are now eight options (CPRI Specification V7.0)
- MT1000A supports Option 8, 10.1376 Gbps, reflecting marketing requirement of supporting exploring mobile network bandwidth.
- MT1000A can perform simultaneous testing up to 2 ports to reduce commissioning testing time.

| Option | Bit rate (Gbps) | Line Code | Support Module      |
|--------|-----------------|-----------|---------------------|
| 1      | 0.6144          | 8B/10B    | MU100010A/MU100011A |
| 2      | 1.2288          | 8B/10B    | MU100010A/MU100011A |
| 3      | 2.4576          | 8B/10B    | MU100010A/MU100011A |
| 4      | 3.0720          | 8B/10B    | MU100010A/MU100011A |
| 5      | 4.9152          | 8B/10B    | MU100010A/MU100011A |
| 6      | 6.1440          | 8B/10B    | MU100010A/MU100011A |
| 7      | 9.8304          | 8B/10B    | MU100010A/MU100011A |
| 8      | 10.1376         | 64B/66B   | MU100010A/MU100011A |
| 9      | 12.1651         | 64B/66B   | MU100011A           |
| 10     | 24.2302         | 64B/66B   | MU100011A           |

#### **OBSAI** Bit Rates

Back to Index page

- Four OBSAI bit rates are defined.
- MT1000A supports 6.144 Gbps, reflecting marketing requirement of supporting exploring mobile network bandwidth.
- MT1000A can perform simultaneous testing up to 2 ports to reduce commissioning testing time.

| Bit rate<br>(Gbps) | Line Code | Support Module      |
|--------------------|-----------|---------------------|
| 0.768              | 8B/10B    | MU100010A/MU100011A |
| 1.536              | 8B/10B    | MU100010A/MU100011A |
| 3.072              | 8B/10B    | MU100010A/MU100011A |
| 6.144              | 8B/10B    | MU100010A/MU100011A |

## C-RAN Market

- Market requirements
  - Minimizing number of BBUs per antenna cuts operator costs (rent, power, HW, etc.)
     Locating BBU 15 km or more from multiple BRH requires reliable

Locating BBU 15 km or more from multiple RRH requires reliable connection i.e. C-RAN

- CPRI runs over C-RAN with two main layers:
  - Layer 1: Physical transport
  - Layer 2: Several areas

C-RAN main interest is L1 in-band protocol; understanding this area allows operator to troubleshoot alarms and errors

In CPRI, BBU is called REC, and RRH is called RE (Fig. 1 from CPRI Specification V6.0)

#### CPRI/OBSAI - Test cases

#### Test case 1

- Test case 1
  - Test line <u>between</u> REC(s) and RE(s)
    - System testing
    - Installation testing
  - Line can be
    - Optical
    - Carried over radio link or microwave link
    - CPRI over OTN
    - Instrument connected via optical interface to link
  - Terminate both sides of transmission line
    - BER test (Framed or unframed) \*1
      - One side could be loopback
    - Delay measurement
      - With one side in loopback

#### Back to Index page

#### CPRI/OBSAI - Test cases

- Test case 2
  - CPRI Specification V7.0 defines
    - When both devices are in Operation state or in Passive link state, link is in normal operation
  - Operators find that up to 80% of CPRI turnup issues occur in lowest layers
  - Essential during installation to: confirm RRH/RE can communicate to ground even without BBU/REC
    - Confirming RRH/RE can connect to Passive link state
    - Confirming HDLC layer (Layer 2) network is connecting
  - Completing above minimizes chance of issues during BBU/REC installation

Extract from Figure 30 in CPRI Specification V7.0: Start-up states and transitions

#### CPRI/OBSAI - Test cases

- Test case 2
  - Connect to actual equipment (REC or RE) to verify alive
    - Signal level and frequency measurement
      - Optical cable ends can be checked with Video Inspection Probe (VIP)
    - Monitor control word K30.7 indicates error in 8B/10B line code (CPRI option 1-7 only) – and 8B/10B code violations
    - Check equipment behavior
      - Check that equipment can reach Passive link state
      - Confirm HDLC layer (Layer 2) network connecting
      - Check equipment behaviour at alarms

Back to

#### CPRI/OBSAI - Test cases

- Test case 3
  - Monitoring actual line between REC (Radio Equipment Control) (master) and RE (Radio Equipment) - (slave)
    - Using dual port in Pass-through mode or monitor
      - Monitor interactive behaviour of equipment
    - For maintenance or in-service troubleshooting

- Supports CPRI interface rate option 1 (614.4 Mbit/s) to option 8 (10.1376 Gbit/s)
  - Ensures testing of current and future CPRI interfaces

| Port                  | Unframe                  | ed - PRBS15 Ir | werted   |               | ( |

Graph and Event log screens for easy viewing and analysis

Back to

- Market requirements
  - CPRI over OTN:
    - Transport raw radio (CPRI) data from RE over optical fiber to central location for baseband processing
      - Single location serving multiple REs
      - Consolidation has huge power and cost savings over distributed approach without impacting network scalability
  - OTN supports transport of several protocols over same fiber
    - Same management system across network

Support for CPRI over OTN enables tests of latest CPRI implementations

#### MT1000A OBSAI Testing

OBSAI Frame Commissioning Test, Error/Alarm analysis, and APS and Delay measurements

- Helps cut costs of MFH I&M
- Ideal low-cost signal source and measuring instrument for developing and evaluating MFH transmission equipment

- Supported rates: 768 M, 1536 M, 3072 M, and 6144 Mbps
- Tx/Rx status data display
- RP3 Address, and Type editing
- 6144 M auto-scrambling, Scramble SEED manual setting

#### <u>Useful Point !</u>

Supports confirmation of Tx/Rx settings at one screen and simplifies evaluation of connection conditions with status information. Moreover, simultaneous installation of OBSAI function, SEEK function, OTDR module and CPRI module combines all functions required by MFH onsite tests in one unit for excellent maintainability and reduced costs.

Back to

#### eCPRI/IEEE1914.3

- Market
  - Most MFH networks are based on CPRI and will have to move to these new frame formats for 5G or before allowing the operator to manage the massive increase in data throughput requirements.
  - IEEE 1914.3 frames will likely also to be utilized back into the MBH as the architecture as the connection from Core / Metro to the MFH will evolve.

MT1000A support BER test of eCPRI/IEEE 1914.3

## eCPRI/IEEE1914.3(RoE) 25G Dual port solution

Back to Index page

- Market
  - Conventional fronthaul and backhaul network configurations are being reexamined to support 5G services and a switchover to eCPRI and RoE (Radio over Ethernet) packet-based protocols is being examined as part of this change.

Mobile xHaul application

With dual-port 25G eCPRI/RoE measurement support, the MU100011A offers efficient signal generation and analysis plus precision one-way latency measurement of Transport networks, supporting tests for implementing ultra-Reliable Low-Latency Communications (uRLLC).

This will play a key role in Next Generation Fronthaul Interface (NGFI) network configurations and Fronthaul Transport Node (FTN) evaluations.

•Using the dual-port 25G eCPRI/RoE function helps to optimize testing while cutting the number and cost of required test instruments.

• OTN Metro and Core Network Installation and Maintenance

# OTN Background

- ITU-T defines an Optical Transport Network (OTN) as a set of Optical Network Elements (ONE) connected by optical fiber links, able to provide functions of transport, multiplexing, switching, management, supervision and survivability of optical channels carrying client signals.
  - Typical signals carried by OTN are:
    - SONET/SDH
    - Ethernet
    - Fibre Channel
    - CPRI
  - Key OTN functions include:
    - Mapping/demapping of non-OTN signals
    - Multiplexing and demultiplexing of OTN signals
    - Forward Error Correction

# OTN Background

- OTN networks first designed for submarine sections
  - Quickly moved to Core  $\rightarrow$  Metro  $\rightarrow$  Access
    - Operators can implement more services, control and management
- Simplifying network management is key for operators
  - Control customer traffic from access point and across network (single system, single management)
  - Greater insight about faults, quick repair and fewer maintenance issues
  - Single management of all legacy and replacement technologies

# MT1000A OTN Test Function

- Comprehensive OTN testing for metro and core network I&M
  - OTU1, OTU2, OTU3, OTU4, OTU1e, OTU2e, OTU1f, OTU2f, OTU3e1, OTU3e2 tests
  - ODU0, ODUflex<sup>\*1</sup>, ODU1, ODU2, ODU3, ODU4.
     ODU0 to ODU4 multistage mapping
  - Test Ethernet, CPRI, Fibre Channel and SDH/SONET client signals mapped to OTN signal
  - OTN tests with bulk signals at OTN level
  - Comprehensive OTN error and alarm statistics
  - OTN error performance measurement (G.8201 or M.2401)
  - ITU-T O.182-compliant FEC test
  - Delay measurement
  - OTN header edit and capture
  - OTN TCM monitoring and generation
  - Service disruption analysis using APS application
  - OTN tributary scan

Back to

MT1000A OTN Test configuration (1/3)

- OTN out-of-service testing
  - For installation and commissioning

### SDH/SONET in OTN

 Upgraded Client signal selection method used for ATN mappings at SDH-OTN-BERT application, and enabled Client SDH and Client PRBS signal switching without closing applications to improve operation efficiency

Back to

- OTN status information
  - Overview of current status of alarms and errors
  - Optical level and rate information
  - GO/NO GO color coding gives easy overview of line status

- OTN Over Head (OH) Byte capture
  - Inspect OH bytes for detailed troubleshooting
    - Updates about every 1 second

- Comprehensive OTN Testing—continued
  - ODUflex testing
    - ODUflex: New feature of OTN
    - Method for flexible allocation of bandwidth to client signal
      - Makes most efficient use of OTN capacity
    - Capacity of ODU2 split into eight 1.25G ODUflex time slots

- In above example, FC-400 (4GFC) Fibre Channel signal occupies four ODUflex time slots, freeing other four ODUflex time slots in ODU2 for other payloads
- MT1000A supports ODUflex testing, allowing operators deploying new technology to verify working correctly throughout network

Back to

- ODUflex
  - Configuration and results

Back to

# MT1000A OTN FEC Test

- ITU-T O.182 Compliant FEC Test
  - Anritsu's proposed FEC performance tests using Poisson distribution random errors adopted by ITU-T O.182 in July 2007
  - Reproducible/accurate FEC error correction tests by generating random signal errors (Poisson distribution)

# MT1000A OTN FEC Test

- ITU-T O.182 Compliant FEC Test
  - FEC error insertion with MT1000A

• VIP: Video Inspection Probe

## **VIP: Video Inspection Probe**

- VIP Video Inspection Probe
  - Judge quality of optical fiber and module endface
  - Find trouble in optical fiber and module endface Reduce degraded signal transmission and effect on measurement results
  - Prevent connected optical fiber and module endface damage
- Dirty connector endface...
  - Dirty connector endface causes more reflection
  - Cleaning connector endfaces maintains good connection
- Damaged connector endface...
  - Damaged connector endface has greater reflection and larger ORL (Optical Return Loss)
- MT1000A supports G0382A/G0306B VIP option
  - Table View identifies endface "defects" or "scratches"
  - Automatic fiber endface pass/fail determination made in accordance with IEC61300-3-35 standard

Shows worst Status of all test applications.

All applications OK

One or more applications have Yellow Test Status (and no Red)

One or more applications have Red Test Status

• Clicking Test Applications Summary icon opens Overall Test Status screen

Back to

Index page

#### **Overall Test Status**

- For remote viewing test status for all current Test Applications
- Test Application Summary and Overall Test Status has no current/history distinction—basically show history.
- To "clear" Test Status: Restart test.
- User-configurable to show Test Application Summary indicator—and to access Overall Test Status screen

- Overall Test Status updates only during <u>testing</u>:
  - Green: No trouble
  - Yellow: Errors (but no Alarms) pending or occurred in past
  - Red: Threshold violation or Alarms pending or occurred in past

#### **Overall Test Status**

• Adapts to number of running test applications

#### One test application

#### Two test applications

- Event Log gives users powerful means to analyze problems of long term testing
- Records what/when problem happened and how long/often been happening

#### MT1000A Instrument Setup

- Password protection
  - Prevent unintended changes to parameters and measurement start/stop
  - Enabled/disabled by user

• Report Generation

Back to

#### **Report Generator**

Back to Index page

- Generates reports:
  - Summary page only
  - Summary and Statistics pages
  - Port setup and Application setup included as option
  - User-customized report including:
    - Logo in .png format
    - Customer ID, Operator ID, notes, and similar information in measurement .pdf
      reports
  - Output report in .pdf, .CSV or .XML format to USB port

|                           | Function   | Multi-<br>user | File Sharing |
|---------------------------|--|----------------|--------------|
| VNC                       | Control from remote site                                 | No             | No           |
| Remote GUI<br>(MX100001A) | Control from remote site<br>Port sharing<br>File sharing | ОК             | ОК           |
| SCPI                      | Automation<br>Control from remote site                   | ОК             | ОК           |

#### MT1000A Remote Operation – Applications

- Remote access
- Troubleshooting spurious errors
- Long-term surveillance and stability tests
- Multi-site surveillance
- Multi-user access
- Display screens via projector
- Documentation and training
- Operate MT1000A from PC with VNC client or new Remote GUI app

- Remote GUI application runs on Windows 7/8/8.1
- Port-oriented connection not unit-oriented
- Multiple users share same unit and use separate ports

• Connect one application to up to two GUIs

- Only one GUI can change settings and start test (Read/Write)
- Next user just observes (Read only)
- Any user can take right to change settings with exchangeable rights

Back to

- Remote GUI can run as 'Standalone' viewer
- Users can:
  - Generate report(s)
  - Analyze results offline
  - Create setup file(s) for deployment
- Remote GUI supports
  - Firmware update via LAN
  - Remote unit reset

- Share file system—user can access file system from Windows Explorer
- Access PC file system—user can save/load file to/from Windows memory

| General        | File Sharing               | Network           |       | -        | Anritsu                        |

Remote Control–Scripting

### **Remote Control Scripting Option**

- Automated testing for developing applications •
- Remote control commands/replies as ASCII format strings •
  - SCPI 1999.0 compliant with IEEE 488.2 mandatory common commands
- Fast command response •
  - Execute up to 8 commands per second
    - Reduces test time at mass production
- Communication between controller (PC) and MT1000A: ۲
  - Via MT1000A Ethernet Service Interface
    - TCP/IP connection
      - Test facility can be isolated LAN
  - Via WLAN
  - Via GPIB
- Includes documentation and scripting example
- LabVIEW driver sample •

Remote Control – GUI & Scripting

#### Remote Control GUI & Scripting Option

- Execution became possible simultaneously about remote GUI (MX100001A) control and SCPI control at each port.
  - Customer can use one facility more effectively by being able to use two kinds of control commands at the same time.

Back to

## Remote Control GUI & Scripting Option

- Back to Index page
- Show who are using the port on the resource monitor screen of MT1000A

#### Remote Control GUI & Scripting Option

If the IP address of MT1000A connected to the network is known, it can be powered-on/off by remote control from the MX100001A (only when connected to AC adapter).

Automation Testing

Back to

#### Automation Testing (1/3)

- Installation and maintenance tests have several challenges.
  - Varying Work Time and Test Results Quality Dependent on Technician's Experience
  - Increasing Risk of Work Errors as Test Items increase
  - Reducing work burn to minimize errors
- Network Master have the One-Button Test Mode by creating a settings file for each manual procedure enables field technicians to run tests and complete pass/fail evaluations with a single click.

Setting Test Equipment: Executing Test: Evaluating Results:

Manual Manual Based on data

Setting Test Equipment: NA Executing Test: NA Evaluating Results: NA → One-button automation
